

COMPANY PROFILE

As part of the GiGi Investment Group of companies, Integrated Pump Technology offers a 'one-stop', solution driven operation catering to the mining and allied industries. Sales of premium global driven brands, experienced technical service and prompt support ensures that we can offer you important **SOLUTIONS** for important problems.

About Us

Integrated Pump Technology (Pty) Ltd, a member of the GiGi Investment Group, offers tailor-made solutions for submersible pumping applications to industries across Southern Africa.

Apart from marketing and distributing industrial pumps, our services include:

- ✓ Project consultation
- ✓ Repairs, servicing & testing
- ✓ Pump rentals

How We Do This

Based in Gauteng, we are represented across Southern Africa, through a network of distributors and partners who are experienced in the operation and application of our product range.

Our team consists of 25 passionate sales, service and administration personnel who understand your needs and are fully committed to supporting our Integrated Pump Technology customers and distributors across Southern Africa.

Solution Driven

Our solutions driven team of product consultants, engineers and service technicians have extensive knowledge and expertise in the mining and wastewater segments.

Our Approach

Combined with their hands-on approach, our team ensures that clients receive the most appropriate, cost-effective solution for their needs, professional advice, prompt service and strong technical support. We put our customers FIRST.

Engineered Bespoke Solutions

We understand that every project is different, each with its own challenges and often requiring a unique approach in order to solve a unique and sometimes complex problem. We are experienced in consulting to and servicing the mining industry, and we will analyse your needs and work out the perfect solution for you - if necessary designing and engineering a bespoke solution.

MEAN PEACE OF MIND**

Products and Services

Dewatering Pumps

We have the dewatering solution for your needs!

Our dewatering pump product range, which includes submersible slurry pumps, drainage pumps, sludge pumps and portable pumps means we have a selection to best suit your needs. Our pumps are available for purchase as well as short or long term rental. We stock a full range of pump accessories and spares and offer servicing and repairs.

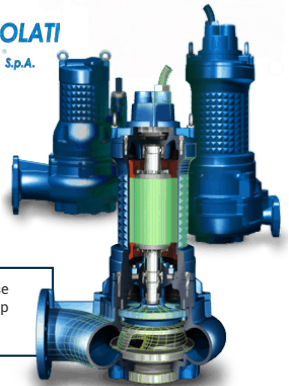

Grindex submersible pumps are used in a variety of tough environments, such as face and cubby dewatering of underground mines, in open pit mines and in construction. Built to withstand the arduous conditions that these areas can present, Grindex gets the job done! Grindex pumps are also designed to be kind to the environment with extremely low emissions, while simultaneously enduring all the trials of tough site work.

Waste Water Pumps

We have the waste water solution for your needs!

Our waste water pump product range, which includes sewage pumps, large drainage pumps, mixers and aerators offer the best selection for any problem you may have. Our pumps are available for purchase as well as short or long term rental. We stock a full range of pump accessories and spares and offer servicing and repairs.

The Faggiolati range of robust, quality submersible pumps, mixers and aerators are suitable for a diverse range of submersible drainage and wastewater applications. When a reliable, robust and efficient pump capable of operating in often arduous conditions is called for, Faggiolati pumps are a good choice.

Dredging And Hydro Mining

Severely silted-up ponds and reservoirs can impact on the water storage capabilities of a mine or plant, negatively affecting downstream processes. Locally designed and engineered, the Slurry Sucker Dredge Unit is capable of extracting high tonnages due to the design and engineering of the dredge head.

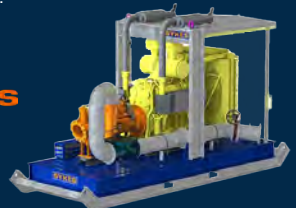

This innovative SlurrySucker Dredge Unit is suitable for dredging and cleaning water capture areas where silt or slime is an issue, or where retention and water holding capacity is being threatened. With the SlurrySucker Dredge Unit, regular cleaning of process water ponds, return water dams or other water storage areas is made simpler and faster. The introduction of the SlurrySucker Dredge Units into the company's short and long term hire fleet will assist mines in ongoing maintenance.

Diesel Pumps

We have the diesel solution for your needs!

With our range of self-priming diesel pumps, you can be sure that our pumps can be used for diverse applications across a number of industries. Our pumps are available for purchase as well as short or long term rental. We stock a full range of pump accessories and spares and offer servicing and repairs.

Our range of SYKES self-priming diesel-driven pump sets is suitable for applications where electrical power is not readily available. They are trailer-mounted for ease of use and engineered for optimum pumping with minimum energy consumption. Skid-mounted pumps are also available. SYKES pumps are powered by high performance diesel engines, utilising reputable brands known for reliability, ease of service and parts available.

Our **Accessories**

Whether on-site or in our service centre, our service professionals are always available, ensuring fast, efficient and reliable provision of original spare parts and quality service at short notice.

Pump System Control Panels

We offer custom engineered pump automation solutions for your dewatering. We can supply a range of control panels for all pumping applications.

Industrial Pump Fittings

We stock a full selection of pump fittings Including; Couplings, quick couplings, hose clamps, check valves flanges, bends, tandem connectors, collars, zinc anodes.

Industrial Pump Hosing

A wide range of industrial pump hosing is available in various widths, materials and lengths.
